ACell + PRP Hair Treatment

An advanced regenerative approach that supports hair follicles, enhances cellular renewal and strengthens hair health.

Typically applied in a single session

What is ACell + PRP?

ACell + PRP is an advanced hair treatment method that combines extracellular matrix (key structural components outside the cell) powder, which enhances cell-to-cell communication and tissue regeneration, with platelet-rich plasma (PRP) derived from the individual's own blood.

ACell

Aims to create a supportive environment for cellular communication in the scalp by providing an extracellular matrix structure.

PRP

Supports the process with platelet-rich plasma obtained from the individual's own blood, which contains growth factors.

Combination

When ACell powder and PRP are used together, the aim is to strengthen the microenvironment that nourishes hair follicles.

Main Purpose of the Treatment

To support the existing hair follicles, strengthen the weakening hair structure, and help create a healthier scalp environment in hair transplantation plans.

Regenerative approach:
Focuses on supporting the scalp's renewal process.

Personalized plan:
Treatment protocol is determined after a physician's assessment.

The treatment plan is determined personally after a physician's assessment.

How Does It Work?

The protocol can be summarized in three main steps.

How Does ACell + PRP Work?

1

Extracellular Matrix (ACell)

A structural matrix that connects cells and stimulates stem cells to remodel the surrounding healthy tissue and initiate new tissue production.

2

Contribution of PRP

Blood plasma rich in platelets and growth factors, derived from the patient's own blood, activates the ACell powder and strengthens the cellular environment that nourishes hair follicles.

3

Typically Applied in a Single Session

While conventional PRP often requires multiple sessions, the combination of ACell + PRP can generally be applied effectively in a single session.

Application Process

1

Physician Evaluation

Hair loss type, hair quality, donor area and scalp condition are analyzed.

2

Personalized Planning

The purpose of ACell + PRP application is to create a personalized treatment plan based on the scalp region and individual needs.

3

PRP Preparation

Platelet-rich plasma is obtained from the patient's own blood.

4

ACell Combination

The extracellular matrix powder is combined with PRP and applied to the treatment area.

5

Monitoring Process

Changes in hair quality are monitored over the following months, and follow-ups are planned accordingly.

Who Is It Suitable For?

- Individuals experiencing hair loss
- Those with fine and weak hair structure
- Those who wish to support scalp health before a hair transplant
- Those who want to strengthen the healing process after a hair transplant
- Those who wish to support the harvesting of the donor area

Note: Suitability and the number of sessions are determined after a scalp examination and physician evaluation.

Key Benefits

A supportive approach in the same setting where hair quality, transplantation preparation and the recovery process are managed.

What Are the Key Benefits?

01

Helps Reduce Hair Shedding.

Aims to strengthen the micro environment that supports hair follicles.

02

Supports Improved Hair Quality.

May contribute to stronger, thicker and fuller-looking hair, including fine and thinning hair.

03

Supports Hair Transplant Success.

May be preferred to prepare the recipient area before transplantation or to support the transplanted follicles and donor area after the procedure.

04

Can Contribute to Long-Term Results.

By supporting the cellular renewal process, the benefits may become more evident, typically after 6 months and beyond.

Use Together with Hair Transplantation

Before transplantation:
Can be evaluated to support scalp health and prepare the treatment area.

After transplantation:
May be planned to support the healing and strengthening process of both the transplanted follicles and the donor area.

Donor area:
Can be included in a personalized protocol to support the recovery process of the donor area.

Expected Timeline

0 Months
Treatment plan and application

1–3 Months
Monitoring of scalp health and hair quality

3–6 Months
Evaluation of changes

6 Months+
More noticeable results

IMPORTANT NOTE:
The ACell + PRP application is personalized based on your hair structure and needs after a physician's assessment.
